

VSM on Prem

Management Platform for VIA Devices

VSM (VIA Site Management) On Prem is an advanced software management platform that enables an administrator to deploy, manage, configure, and monitor all connected VIA devices from one central location. VSM On Prem is compatible with all VIA device models.

Kramer's new VIA 4.0 is all about the end user. The new VIA application UI is intuitive, user-friendly and much easier to use. VIA 4.0 enables any user, including guests, to easily and securely connect and automatically disconnect at the end of the session

FEATURES

Deployment - Easily on-board all your VIA devices across networks

Management - Organize VIA devices and create settings templates

Configuration - Set defaults and configure features

Health Checking - Monitor storage level, On/Off statuses, and current firmware version

Usage Analytics - Create usage reports for all of your VIA devices

Alerts - Set customized messages to display on VIA screens as needed

Digital Signage - Manage content, create templates and schedule campaigns

Automated Device Updating - Schedule and automatically push new firmware updates
